

GOPAKUMAR

BACKEND DEVELOPER | NODE.JS & JAVA/SPRING BOOT | MICROSERVICES

8848074537 | Gopakumarg893@gmail.com | Cherthala, Alappuzha, Kerala
github.com/Gopakuma | linkedin.com/in/gopakumar-g-838b1b216 | Portfolio: gopakuma.github.io/Portfolio2.1

SUMMARY

Backend Developer with 2.5+ years of professional experience building production REST APIs, distributed services, and internal platforms in Node.js/TypeScript and Java/Spring Boot — including MOM-BENCHMARK, a live hospital benchmarking platform used across Europe, plus Spring Boot systems for news analytics and medical camp registration. Since 2024, has continued deepening enterprise Java expertise through a production-style microservices platform covering API gateways, service discovery, JWT-based authentication, and role-based authorization. Comfortable across the full backend stack (REST APIs, relational and in-memory databases, Docker, event-driven patterns) with a consistent focus on clean architecture and separation of concerns.

CORE TECHNICAL SKILLS

- **Languages & Frameworks:** Java 21, Spring Boot, Spring Security, Spring Cloud Gateway, Spring Cloud Netflix Eureka, Spring Data JPA (Hibernate), Node.js, Express.js, TypeScript, JavaScript
- **Microservices & Auth:** Microservices Architecture, JWT Authentication, Access/Refresh Token Rotation, Role-Based Access Control, API Gateway Design
- **DevOps & Cloud:** Docker & Docker Compose, Git (branching strategies), AWS (EC2, S3), Multi-server Deployment
- **Databases:** PostgreSQL, MSSQL, Redis
- **API, Testing & Docs:** REST APIs, OpenAPI/Swagger, Postman API Testing, Data Validation

PROFESSIONAL EXPERIENCE

Software Engineer — Simplogics Solutions | 2022 – 2024

Delivered three backend projects spanning Node.js/TypeScript and Java/Spring Boot.

MOM-BENCHMARK | Node.js, TypeScript, MSSQL

- Architected and optimized a business-critical multi-server architecture (4 servers), ensuring high availability and seamless load distribution.
- Engineered scalable RESTful APIs using Node.js and TypeScript, introducing a shared internal package that streamlined API consumption across multiple services.
- Designed and implemented robust MSSQL schemas, refactoring database layers and complex external queries to significantly reduce latency.
- Spearheaded system upgrades by migrating core legacy systems to Node.js v20, eliminating deprecated dependencies, and implementing advanced full-text search capabilities.
- Enforced code integrity by establishing a structured Git branching strategy, executing rigorous API testing via Postman, and integrating comprehensive data validation mechanisms.

Automated News Aggregator & Keyword Analytics Tool | Java, Spring Boot, Redis, PostgreSQL

- Built a high-throughput web scraping engine in Spring Boot to concurrently extract real-time headlines from 5 major Malayalam news channels.
- Implemented Redis-based event signaling between servers so a secondary service auto-initialized its API once scraping and database population completed.
- Engineered an analytics API supporting date-range queries to calculate and track keyword frequency and trends over custom timeframes.

Medical Camp Registration System | Java, Spring Boot, PostgreSQL

- Designed the relational database schema from scratch and built a Spring Boot backend for registering and managing patient records at medical camps.
- Implemented full CRUD REST APIs for patient registration, record updates, lookups, and deletion, following RESTful API conventions.

JAVA / SPRING BOOT MICROSERVICES — PERSONAL PROJECT (2024 – PRESENT)

Building on the Spring Boot work above, developed a production-style microservices platform to go deeper on API gateways, service discovery, and secure, stateless authentication.

E-Commerce Microservices Platform | Java 21, Spring Boot, Spring Security, Spring Cloud Gateway, Eureka, PostgreSQL, Docker, JWT

- Designed a microservices architecture with API Gateway, Eureka Server, Auth Service, User Service, and Product Service, each with an isolated database and independent deployability.
- Built a centralized Auth Service issuing JWT access and refresh tokens (with refresh-token rotation and single active refresh token per user), embedding claims such as username, UUID, email, and role.

- Implemented stateless, gateway-centric authentication: the API Gateway validates tokens and injects trusted identity headers so downstream services never trust client-supplied identity.
- Enforced role-based authorization (ADMIN / CUSTOMER) using Spring Security method security (@PreAuthorize), with each service constructing its own SecurityContext from Gateway headers.
- Delivered Auth, User, and Product services with registration, login, token refresh, profile management, admin user management, and admin-only product CRUD.
- Applied production security practices throughout: BCrypt password hashing, disabled-account login prevention, stateless authentication, and consistent RESTful API design.
- Containerized the full stack with Docker & Docker Compose; documented an active roadmap covering Order/Cart/Payment services, Redis caching, Kafka/RabbitMQ, Resilience4j circuit breakers, Spring Cloud Config, CI/CD, and Kubernetes.

OTHER PROJECTS

Stretford End — Manchester United Fan Portal | Node.js, React.js, TypeScript, MSSQL

- Built a full-stack fan platform with real-time chat, structured squad insights, and high-frequency content delivery; designed secure authentication/authorization and database synchronization patterns.

Developer Portfolio | Next.js, Tailwind CSS | gopakuma.github.io/Portfolio2.1

- Designed and deployed a responsive, SEO-optimized personal portfolio using Next.js server-side rendering.

EDUCATION

- **Master of Business Administration in IT** — Suresh Gyan Vihar University, 2021 – 2023
- **Bachelor of Computer Science** — University of Kerala, 2018 – 2021

LANGUAGES

English • Malayalam • Tamil
